.kenig

**Real Time
Ethernet
Controller**

EtherCAT technology.

EtherCAT Slave *(taken from ETG)*

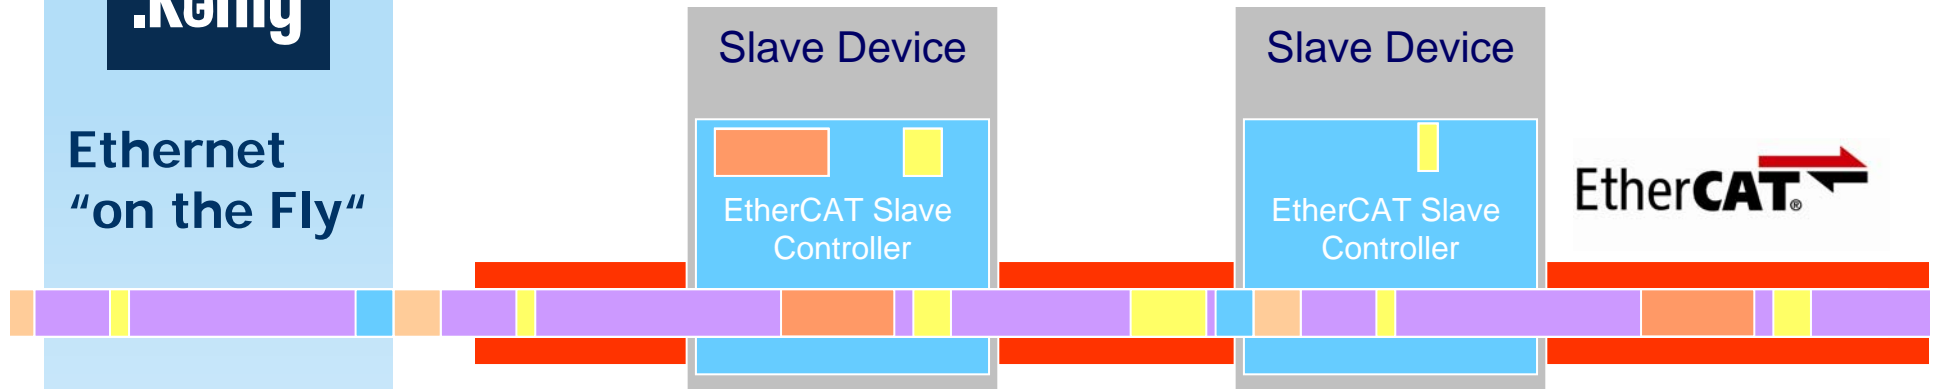

.kenig

Ethernet
"on the Fly"

EtherCAT technology.

Data exchange *(taken from ETG)*

- Process data is extracted and inserted on the fly
- Frames return on the far end (full duplex)
- Higher bandwidth than Ethernet due to collision avoidance
- Deterministic behavior based on RTOS of **master**

- 100 MBd – not being the end for Ethernet - is
 - **8** times more than **Profibus**
 - **10** times more than **flexray**
 - **100** times more than **CAN**

Comparison

EtherCAT technology.

High speed *(taken from ETG, adapted to testing)*

- 2000 Digital I/O → 250 Byte
- 300 Analog In → 600 Byte
- 300 Analog Out → 600 Byte
- 1 Byte = 80ns
- $1514 * 80\text{ns} \rightarrow$ Telegram length $122\mu\text{s}$
- 600 slaves, 500m cable
- **Frame Cycle Time $276\mu\text{s} \rightarrow$ 44% Bus load**

.kenig

Precise
timing
($\ll 100\text{ns!}$)

EtherCAT technology. Synchronous *(taken from ETG)*

Reference clock

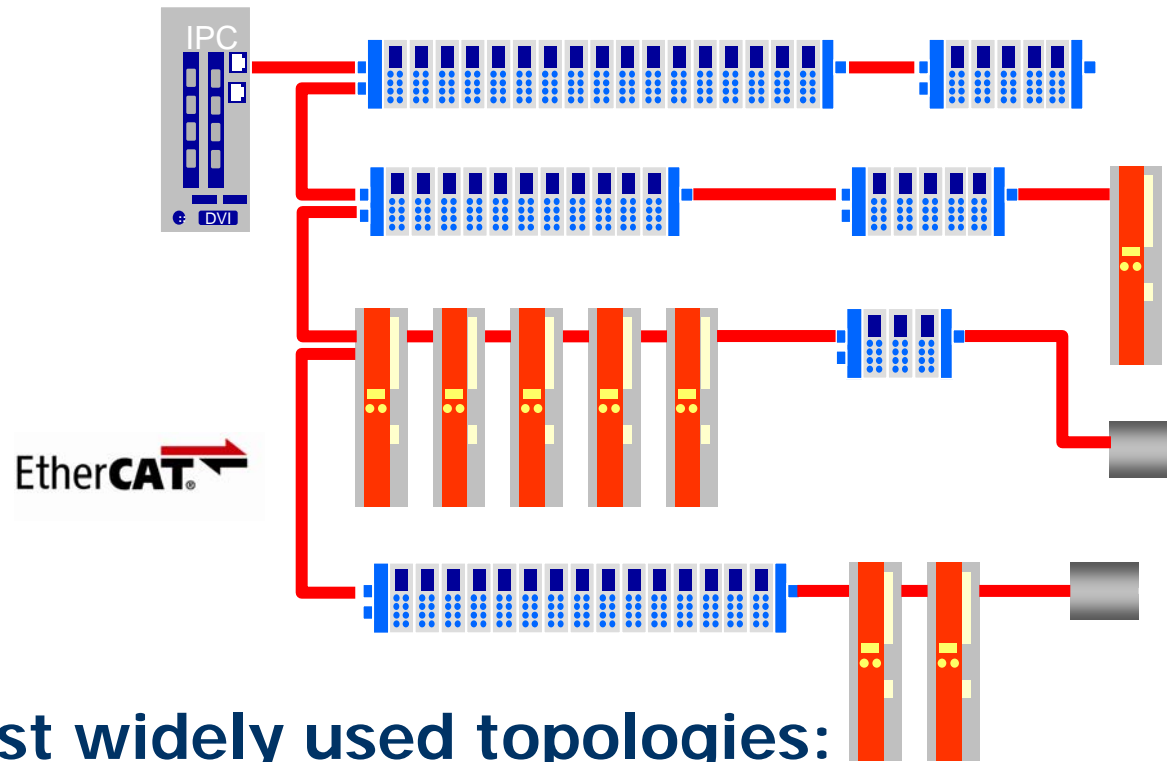

.kenig

Topology
type:

“Daisy Chain”
with
Drop Lines

EtherCAT technology. Topology *(taken from ETG)*

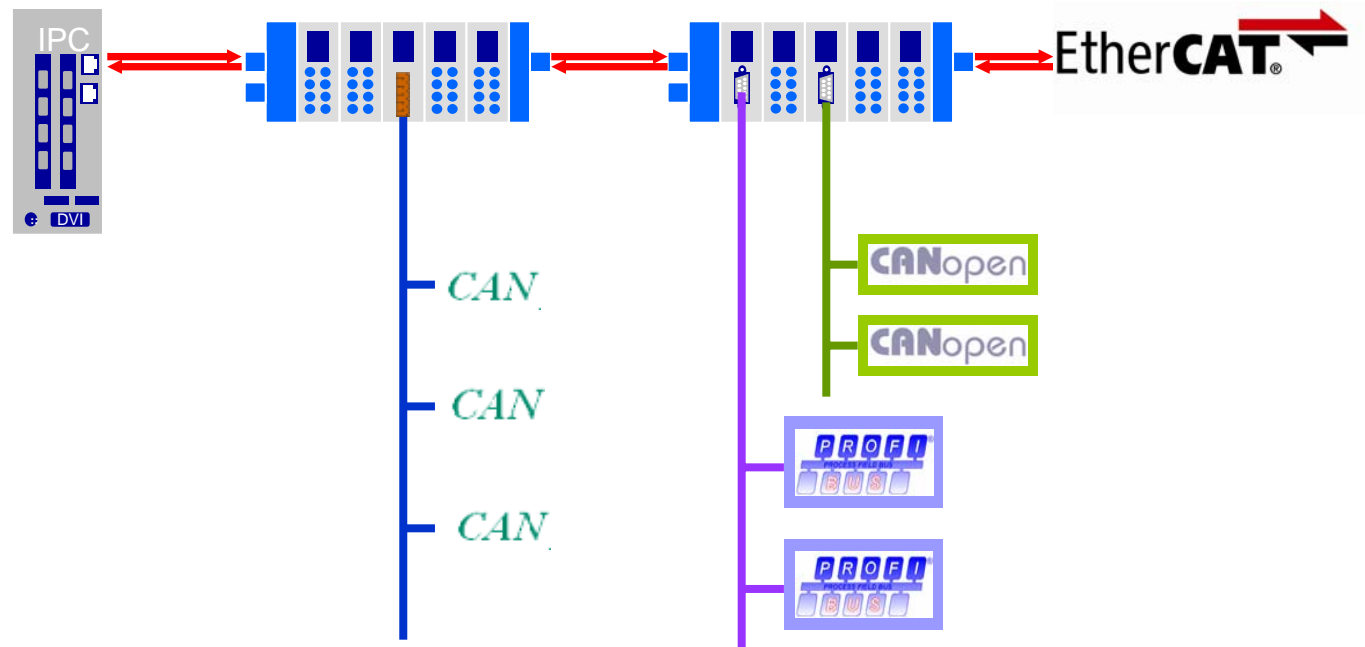

Most widely used topologies:

- line (up to 65.536 nodes)
- tree
- drop lines
- ring

.kenig

Gateways

EtherCAT technology. Topology *(taken from ETG, CAN extended)*

CAN

- for using AK Protocol.
- configuration via DBC-files.

.kenig

Cheapest
master and
infrastructure

EtherCAT technology.

Low costs *(taken from ETG)*

- **Master:**
 - no dedicated plug-in card (co-processor),
on-board Ethernet Port is fine
- **Slave:**
 - low-cost Slave Controller
 - FPGA, IP-Core or ASIC
 - for communication
no powerful μ C needed
- **Infrastructure:**
 - no Switches/Hubs required
 - Standard Ethernet cables + connectors

.kenig

Standard

EtherCAT technology.

Openness *(taken from ETG)*

- EtherCAT is IEC and ISO Standard (IEC 61158, IEC 61784-2, ISO 15745-4)

Commission Electrotechnique Internationale
International Electrotechnical Commission
Международная Электротехническая Комиссия

- Slave Controller from several sources
 - Master Stacks for various RTOS from several providers
 - ETG organizes „Plug-Fests“ and prepares Conformance Test
-

EtherCAT technology. Openness *(taken from ETG)*

EtherCAT technology. Summary

- High-speed
- Deterministic timing behavior
- Different topology types
- Low cost for slave, infrastructure, master (in comparison with other RT Ethernet)
- Openness

.kenig

Demo.

Redundancy, Hot Plug, Slave 2 Slave

.kenig

Demo. Redundancy

Topology

- Cable break detection
- Click on slave to see its settings

Demo. Hot-plug

- Mark slaves as “pluggable”
- Give them an unique address
- Connect/disconnect even during “Operational”

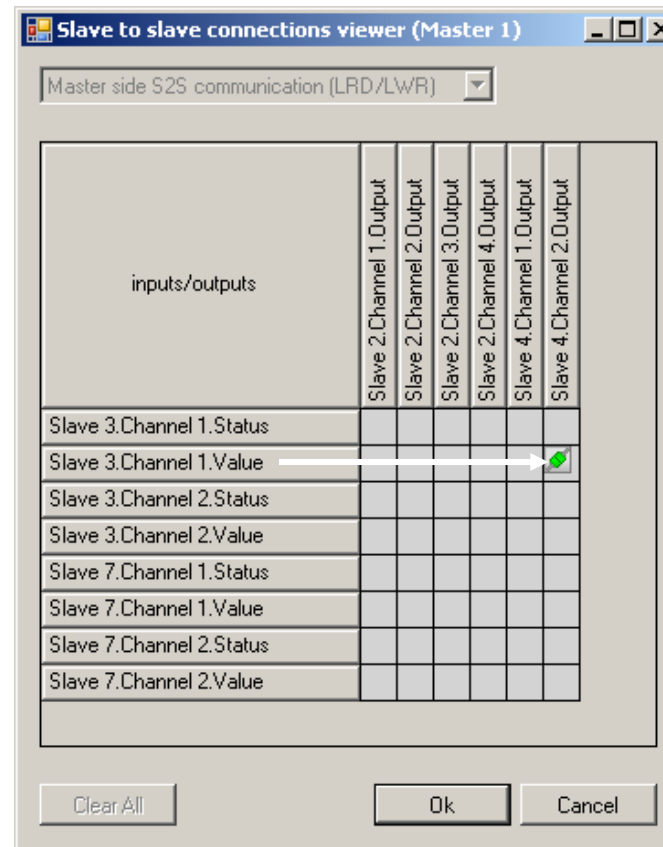

Hot-pluggable slave plugged

Hot-pluggable slave **unplugged**

Demo.

Slave-to-Slave communication

- Outside PLC: **output** passes its value to **input(s)**
- Inside PLC: **input** passes its value to **output(s)**

.kenig

Demo.

100 μ s cycle, 17 byte, <1% CPU (Intel Pentium dual CPU E2180 2.0 GHz)

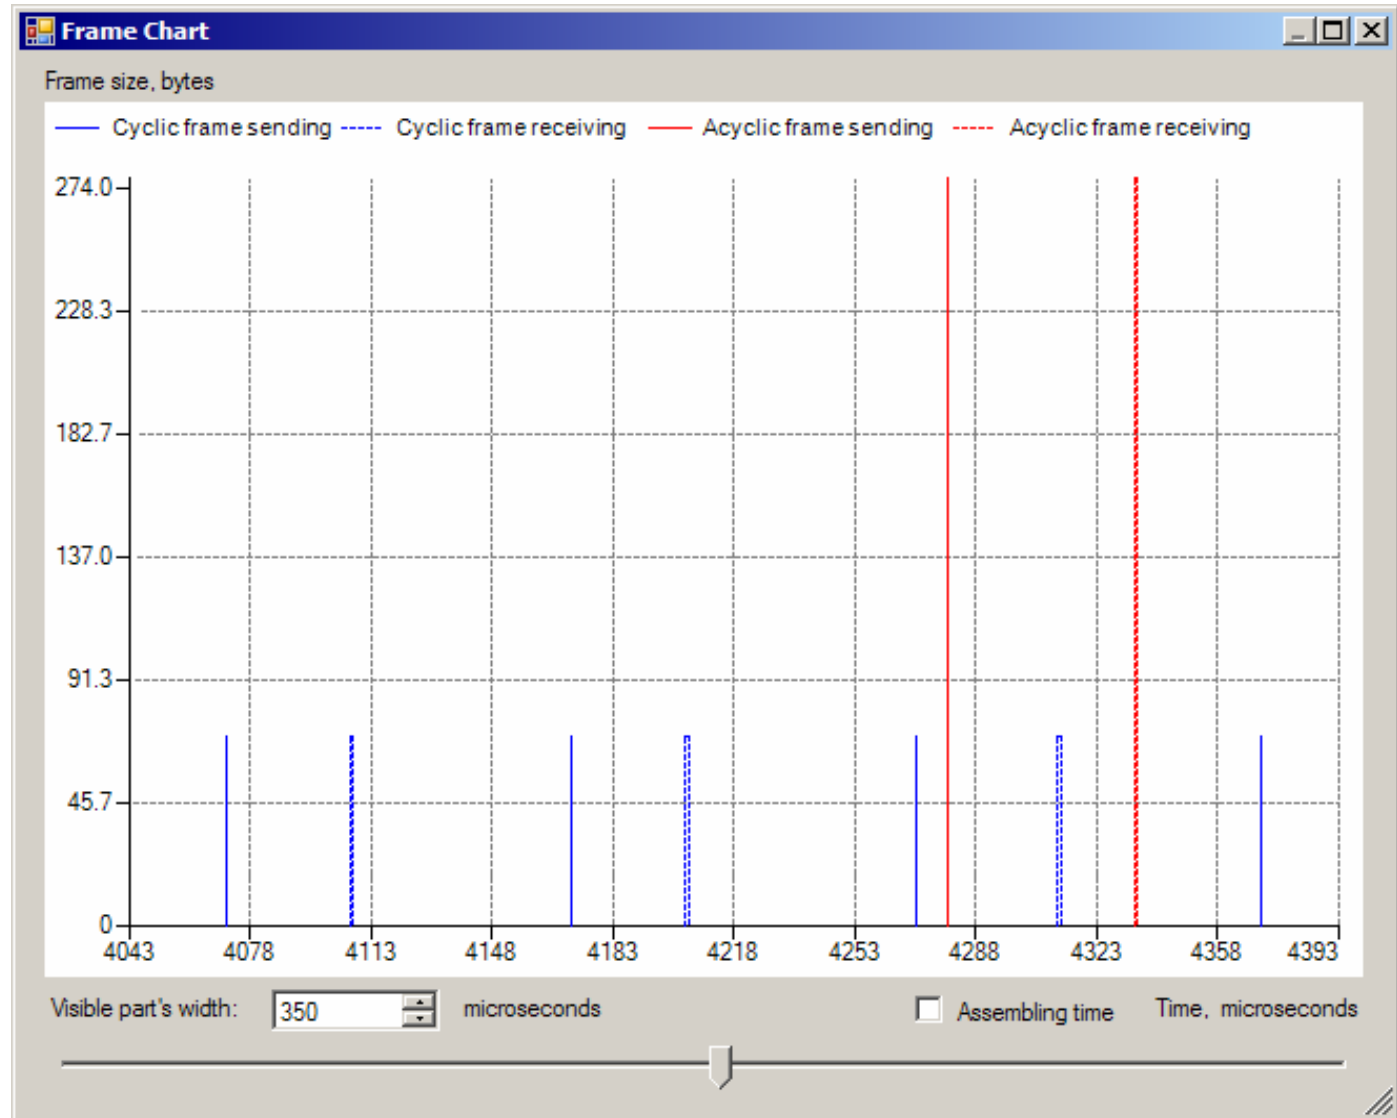

Ethernet link information taken directly from NIC		Real-time information	
Frames/s	12387	Average cycle (μ s)	100
Sent packets	62630	Average cycle jitter (μ s)	0
Received packets	62627	Min cycle (μ s)	93
Sent bytes	6842799	Max cycle (μ s)	106
Received bytes	6842385	Average mailbox cycle (μ s)	300
Send errors	0	Average mailbox cycle jitter (μ s)	0
Receive errors	0	Min mailbox cycle (μ s)	295
Sent dropped packets	0	Max mailbox cycle (μ s)	305
Received dropped packets	0	Send errors	0
Multicast	0	Receive errors	0
Collisions	0	Wrong working counters	0
		Parse errors	0

System information	
CPU usage (%)	0
Bus usage (byte/s)	1351973

Profile

Company. Profile

- Since **1986**
 - About **60** engineers, IT scientists, mathematicians
 - Planning/Service in Feucht near **Nuremberg**, Germany
 - Development/Test in **Minsk**, Belarus
 - Industrial **communication** (Profibus, CAN, EtherCAT)
 - Working in a tight cooperation with main customer **Atotech** (subsidiary of Total)
-

.kenig

PCB lines
with SCADA

Company. Production for **ATOTECH** printed circuit boards

SCADA with worldwide software-installations from KÖNIG

The logo consists of a dark blue square with the text ".kenig" in white, lowercase letters. The dot is a period.

.kenig

Activities

Company. Activities

- **SCADA** systems for copper deposition on Printed Circuit Boards (PCB)
 - **Soft PLCs** according to IEC 61131-3
 - Pulse reverse power supplies with digital control
 - **Vision control** systems
 - Worldwide **installations**
 - **Configurators** for (semi)-automatic creation of
 - electro-schemas
 - quotes
-

.kenig

Highlights

High lights of EtherCAT for automotive testing

- **Redundancy in wiring**
 - **Hot plug of devices**
 - **Slave to Slave communication**
 - **Raw CAN gateway**
 - **Remote configuring of devices**
 - **Different scan rates**
-

.kenig

Thank you!
